

Installation was completed within two days and the machine was operational on day three. There was no hold-up or inconvenience to our day-to-day operations, with work being carried out during and after normal trading hours.

Backup Service has been exemplary, as ART have delivered on their promise of answering and assisting our queries as they have arose. Peter Nolan has made both himself and his staff available, knowing that Capral Aluminium had previous minimum exposure to this technology.

Overall, the pre and post sale service has been commendable and Capral Aluminium looks forward to further growing into this rapidly expanding form of Value Adding and would not hesitate further utilising the services of ART. The machine has exceeded our initial expectation of ART's apparent pursuit of seeking world-class technologies proves their commitment to both their future and the future of companies such as ours.

Yours sincerely,

Capral Aluminium Ltd
