

Jarrahdale Heating and Cooling would like to thank ART for a very professional service in the purchase of the HDP Plasma Cutter, this includes the before and after sale service and installation. Since having the machine we have found it to do everything ART recommended it was capable of doing, saving us considerable manufacturing time. We cut material from 0.55mm mild steel and stainless steel to 20mm thick mild steel. We have found the CNC plasma machine to be user friendly with setup and programming. Since the installation of the plasma in September 05, we have picked up a lot of extra work. Once again we would like to thank ART for professional and friendly service.

Yours sincerely,

Leon Clare

Factory Manager
